GREETINGS

To all our Glad friends and old customers we desire to express our sincere appreciation for your fine patronage the past year. We wish to thank all those who have written us letters of commendation for the excellent results obtained from growing our bulbs. The good will of our customers inspires us to greater efforts to serve you better in the future.

In presenting to you this, our 1949 catalog, we begin our 27th year growing Glads. A world of experience has been gained during this time. Hundreds of varieties have been grown, and many have been discarded that do not come up to our critical judgment.

It has been our policy to send out only the highest quality stock, a policy which has established for us satisfied customers throughout the United States. We are pleased to offer our customers a list of outstanding glads that we highly recommend.

In the past few years the development of sensational new varieties has caused the public to realize the demand for those that have excellent propagating qualities, healthy growth, immunity from disease, good shape of floret, and all around beauty. Only those that continue to prove these qualifications can stand the test of time.

Our descriptions of varieties are not over-emphasized, but as they really are from actual observation.

CLASSIFICATION

This year we are classifying nearly all the varieties of glads that we are listing, as to size, color and approximate days to bloom. The following classification chart is the one used by most of the major gladiolus shows.

The number after the name of the variety denotes the classification number as they are classified in our gladiolus shows at the present time. They are classified in five sizes as follows:

Miniature Glads.....100—Florets under 2½"

Small Glads.....200—2½" through 3¼"

Medium Glads.....300—3¼" through 4-3/8"

Large Glads.....400—4½" through 5-3/8"

Giant Glads.....500—5½" or larger

For example: Crinkle Cream.

In parenthesis (Ellis) is the name of the originator. 400 denotes large size glads. The 10 denotes (light) yellow. Followed are the approximate days to bloom. This is the average time required when large bulbs are planted—when the soil is warm enough to start immediate growth. This may vary in different soils, and in seasons when the rainfall and temperature is not normal. In some instances the days to bloom are not available in certain varieties.

By using this chart you may be able to easily assign placement for your entries at the shows.
